IPL/Skin Rejuvenation & Rosacea After Care

- Immediately after treatment, there should be erythema (redness) and edema (swelling) at the treatment site, which may last up to 2 hours, or longer. The erythema may last up to 2-3 days. The treated area will feel like a sunburn for a few hours after treatment.
- Cool, moist washcloths can be applied to the area for 24 hours after treatment.
- Avoid sun exposure to reduce the chance of hyperpigmentation (darker pigmentation).
- Use sunblock (SPF 30+) at all times throughout the course of treatment.
- The treated pigment will appear darker immediately and within the first few days following treatment. The darkened pigment will flake off like dry skin within 7-10 days. Avoid picking or scratching the treated skin.

There are no restrictions on bathing except to treat the skin gently, as if you had a sunburn, for the first 24 hours.
